## IN THE CLAIMS

1. (Currently amended) A method for treating ventricular dysfunction, heart failure, or imbalance of autonomic tone or endocrinological system, comprising:  
providing at least one electrode in a region associated with nervous tissue in a patient's body; ~~and~~  
automatically applying electrical stimulation via the at least one electrode to improve the cardiac efficiency of the patient's heart in response to receipt of a physiologic signal indicative of a symptom of at least one of ventricular dysfunction, heart failure, or imbalance of autonomic tone or endocrinological system; and  
delivering one of a overdrive cardiac pacing therapy and a post-extra systolic potentiation therapy for at least one cardiac cycle.
2. (previously presented) The method of claim 1, wherein providing at least one electrode further comprises providing at least one implanted electrode adapted to be located adjacent to a patient's spine.
3. (Original) The method of claim 1, wherein providing at least one electrode further comprises providing at least one electrode located external to the patient's body.
4. (previously presented) The method of claim 1, wherein providing at least one electrode further comprises providing at least one electrode adapted to be located in a subcutaneous space of the patient's body.
5. (previously presented) The method of claim 1, wherein applying electrical stimulation further comprises:

Applicants: Hill et al.  
Serial No. 10/039,307  
Page 6

monitoring one or more predetermined physiologic parameters of the patient; and adjusting the electrical stimulation based on the one or more of the monitored predetermined physiologic parameters.

6. (Original) The method of claim 5, further comprising administering cardiac resynchronization therapy; and wherein adjusting the electrical stimulation further comprises adjusting the electrical stimulation based on the administered cardiac resynchronization therapy.

7. (Original) The method of claim 1, wherein providing at least one electrode further comprises providing at least one electrode in a region containing a nerve associated with a trunk portion of the body of the patient.

8. (Original) The method of claim 1, wherein providing at least one electrode further comprises providing at least one electrode in a region containing at least one thoracic vertebrae.

9. (Original) The method of claim 1, wherein providing at least one electrode further comprises providing at least one electrode in a region containing at least one thoracic vertebrae in the range of T1-T12.

10. (Original) The method of claim 1, wherein providing at least one electrode further comprises providing at least one electrode in a region containing thoracic vertebrae T1-T12.

11. (Original) The method of claim 1, wherein providing at least one electrode further comprises providing at least one electrode in a region containing at least one thoracic nerve bundle.

Applicants: Hill et al.  
Serial No. 10/039,307  
Page 7

12. (Original) The method of claim 1, wherein providing at least one electrode further comprises providing at least one electrode in a region containing at least one thoracic nerve bundle in the range of T1-T12.

13. (Original) The method of claim 1, wherein providing at least one electrode further comprises providing at least one electrode in a region containing thoracic nerve bundles T1-T12.

14. (Original) The method of claim 1, wherein providing at least one electrode further comprises providing at least one electrode located adjacent to an intrinsic cardiac ganglia.

15. (previously presented) The method of claim 1, wherein providing at least one electrode further comprises providing at least one electrode adapted to be located within a cardiac or vascular structure for intracardiac or intravascular neurostimulation.

16. (Original) The method of claim 1, wherein the at least one electrode is selected from the group consisting of implanted electrodes, cutaneous electrodes, and subcutaneous electrodes.

17. (currently amended) An apparatus for treating ventricular dysfunction, heart failure, or imbalance of autonomic tone or endocrinological system, comprising:

at least one electrode adapted to be located in a region associated with nervous tissue in a patient; and

means for automatically applying electrical stimulation via the at least one electrode to improve at least one of ventricular dysfunction, heart failure, or imbalance of autonomic tone or endocrinological system in response to a physiologic signal of the patient; and

Applicants: Hill et al.  
Serial No. 10/039,307  
Page 8

means for delivering one of a overdrive cardiac pacing therapy and a post-extra systolic potentiation therapy.

18. (previously presented) The apparatus of claim 17, wherein the at least one electrode further comprises at least one implanted electrode adapted to be located adjacent a patient's spine.

19. (previously presented) The apparatus of claim 17, wherein the at least one electrode is adapted to be located external to the patient's body.

20. (previously presented) The apparatus of claim 17, wherein the at least one electrode is adapted to be located in a subcutaneous space of the patient's body.

21. (Original) The apparatus of claim 17, wherein means for applying electrical stimulation further comprises:

means for monitoring one or more predetermined physiologic parameters of the patient; and

means for adjusting the electrical stimulation based on the one or more predetermined physiologic parameters.

22. (Original) The apparatus of claim 21, further comprising means for administering cardiac resynchronization therapy; and wherein the means for adjusting the electrical stimulation further comprises means for adjusting the electrical stimulation based on the administered cardiac resynchronization therapy.

23. (previously presented) The apparatus of claim 17, wherein the at least one electrode is adapted to be located in a region containing a nerve associated with a trunk portion of the body of the patient.

Applicants: Hill et al.  
Serial No. 10/039,307  
Page 9

24. (previously presented) The apparatus of claim 17, wherein the at least one electrode is adapted to be located in a region containing at least one thoracic vertebrae.

25. (previously presented) The apparatus of claim 17, wherein the at least one electrode is adapted to be located in a region containing at least one thoracic vertebrae in the range of T1-T12.

26. (previously presented) The apparatus of claim 17, wherein the at least one electrode is adapted to be located in a region containing at least one thoracic nerve bundle.

27. (previously presented) The apparatus of claim 17, wherein the at least one electrode is adapted to be located in a region containing at least one thoracic nerve bundle in the range of T1-T12.

28. (Currently amended) A method for treating ventricular dysfunction, heart failure, or imbalance of autonomic tone or endocrinological system, comprising:  
providing at least one electrode in a region associated with nervous tissue in a patient's body;  
automatically applying electrical stimulation via the at least one electrode to improve at least one of ventricular dysfunction, heart failure, or imbalance of autonomic tone or endocrinological system based at least in part on the monitoring one or more predetermined physiologic parameters of the patient; and adjusting the electrical stimulation based on the one or more predetermined physiologic parameters; and  
delivering one of a overdrive cardiac pacing therapy and a post-extra systolic potentiation therapy during at least one cardiac cycle.

Applicants: Hill et al.  
Serial No. 10/039,307  
Page 10

29. (Currently amended) A method for improving at least one of ventricular dysfunction, heart failure, or imbalance of autonomic tone or endocrinological system, comprising:

providing at least one electrode in a region associated with nervous tissue in a patient's body;

automatically applying electrical stimulation via the at least one electrode to alter at least one of ventricular dysfunction, heart failure, or imbalance of autonomic tone or endocrinological system based at least in part upon a monitoring one or more predetermined physiologic parameters of the patient; and

adjusting the electrical stimulation based on the one or more predetermined physiologic parameters; and

delivering one of a overdrive cardiac pacing therapy and a post-extra systolic potentiation therapy for at least one cardiac cycle.

30. (Currently amended) An apparatus for treating ventricular dysfunction, heart failure, or imbalance of autonomic tone or endocrinological system, comprising:

at least one electrode adapted to be located in a region associated with nervous tissue in a patient's body;

means for automatically applying electrical stimulation via the at least one electrode to improve at least one of ventricular dysfunction, heart failure, or imbalance of autonomic tone or endocrinological system-;

at least one sensor associated with the patient and adapted to monitor one or more predetermined physiologic parameters of the patient; and

means for both automatically applying and automatically adjusting the electrical stimulation based on the one or more predetermined physiologic parameters; and

means for delivering one of a overdrive cardiac pacing therapy and a post-extra systolic potentiation therapy for at least one cardiac cycle.

Applicants: Hill et al.  
Serial No. 10/039,307  
Page 11

31. (Currently amended) An apparatus for improving at least one of ventricular dysfunction, heart failure, or imbalance of autonomic tone or endocrinological system, comprising:

at least one electrode adapted to be located in a region associated with nervous tissue in a patient's body;

means for automatically applying electrical stimulation via the at least one electrode to alter the functioning of the patient's heart;

at least one sensor associated with the patient and adapted to monitor one or more predetermined physiologic parameters of the patient; ~~and~~

means for both automatically applying and automatically adjusting the electrical stimulation based on the one or more predetermined physiologic parameters; and

delivering one of a overdrive cardiac pacing therapy and a post-extra systolic potentiation therapy for at least one cardiac cycle.

32. (Currently amended) An apparatus for improving at least one of ventricular dysfunction, heart failure, or imbalance of autonomic tone or endocrinological system, comprising:

at least one electrode adapted to be located in a region associated with nervous tissue in a patient's body;

at least one sensor associated with the patient and adapted to monitor one or more predetermined physiologic parameters of the patient; ~~and~~

a controller adapted to automatically apply electrical stimulation via the at least one electrode to alter at least one of ventricular dysfunction, heart failure, or imbalance of autonomic tone or endocrinological system , and the controller being further adapted to automatically adjust the electrical stimulation based on the one or more predetermined physiologic parameters; and

means for delivering one of a overdrive cardiac pacing therapy and a post-extra systolic potentiation therapy.

Applicants: Hill et al.  
Serial No. 10/039,307  
Page 12

33. (Currently amended) An apparatus for treating at least one of imbalance of autonomic tone or endocrinological system, ventricular dysfunction or heart failure, comprising:

at least one electrode adapted to be located in a region associated with nervous tissue in a patient;—and

a controller adapted to automatically apply electrical stimulation via the at least one electrode based upon a physiologic signal of the patient to improve the cardiac efficiency of the patient's heart; and

means for delivering one of a overdrive cardiac pacing therapy and a post-extra systolic potentiation therapy.

34. (Original) The apparatus of claim 33, wherein the at least one electrode is adapted for positioning in a region containing thoracic nerve bundles T1-T12.

35. (Original) The apparatus of claim 33, wherein the at least one electrode is adapted for positioning adjacent to an intrinsic cardiac ganglia.

36. (Original) The apparatus of claim 33, wherein the at least one electrode is adapted for positioning within a cardiac or vascular structure for intracardiac or intravascular neurostimulation.

37. (Original) The apparatus of claim 33, wherein the controller includes a driver circuit to deliver electrical stimulation to a cardiovascular system in the patient's body.

38. (Original) The apparatus of claim 37, wherein the driver circuit includes a circuit to deliver pacing pulses.

39. (Original) The apparatus of claim 37, wherein the driver circuit includes a circuit to deliver high-voltage stimulation.

Applicants: Hill et al.  
Serial No. 10/039,307  
Page 13

40. (Original) The apparatus of claim 33, wherein the controller includes a drug-delivery device to provide a biologically-active agent to the patient.
